

Healthcare Information – What’s at Stake?

Healthcare providers make mission-critical decisions every day, but sometimes have to do so without all the information they need or would like to have. For many, their IT infrastructure doesn’t support information sharing because it involves a wide range of systems and applications. They also contend with healthcare information that is delivered and shared in many forms: phone, point systems, email, fax and manually to name a few.

Changing industry standards, privacy and security of information and interoperability requirements are also challenges nearly every organization is facing. With these challenges, healthcare providers can become less productive, frustrated and unable to provide the level of patient care that faster, more efficient technology can deliver.

BridgeGate Health™ is a comprehensive suite of integration products that help healthcare providers, payers, hospitals and third party administrators connect the complex data that is passed between internal and external systems, no matter the format, no matter the system, and with virtually no code to be written by busy IT staff.

Beyond robust, highly scalable enterprise-level integration, the BridgeGate Health Integration Suite is designed to help healthcare organizations integrate their systems to meet HIPAA compliance requirements and to automate and streamline the billing, claims, enrollment and eligibility processes that are typically very time-consuming procedures.

The BridgeGate Health Integration Suite includes the following products:

- **BridgeGate HIPAA Compliance Framework**
- **BridgeGate Billing & Claims Module**
- **BridgeGate Enrollment Module**
- **BridgeGate Eligibility Module**

BridgeGate Health Integration Suite

BridgeGate HIPAA Compliance Framework – prepares organizations for HIPAA compliance with quick-to-implement data translation and validation processes for all HIPAA transactions and rules. This framework helps organizations migrate to HIPAA 5010, ICD-10 and any other evolving HIPAA standards.

BridgeGate Billing & Claims Module – helps organizations accurately exchange electronic billing and claims data with their partners, no matter the data format, which provides better visibility of the entire process. The module includes automated templates and workflows, along with an event management capability to correct any inaccurate data being sent or received.

BridgeGate Enrollment Module – provides quicker and easier on-boarding of new members with flexible data capture interfaces and better integration of all pertinent systems, providing subscriber and member information in one central, real-time repository.

BridgeGate Eligibility Module – quickly determines a member’s eligibility for specific procedures based upon diagnosis and other real-time supporting information, and obtains a member’s appropriate formulary information from the pharmacy benefit provider.

All products within the BridgeGate Health™ Integration Suite offer:

- **Dashboard visibility provides one view of all information** – BridgeGate connects all systems or applications, simplifying complex data and transforming data into actionable information.
- **Business intelligence delivered in real-time** – users at every level can make better decisions with real-time information giving you historical, current and predictive views of your business operations.
- **True interoperability and standard compliance achieved** – BridgeGate Health supports healthcare standards such as HL7, NCPDP, CDA, CCD, DICOM and RLS.

Benefits of the BridgeGate Health™ Integration Suite

- **Rapid implementation** – simple, easy to use integration solution that puts the power in the hands of business analysts – most implementations are complete in days vs. weeks
- **Complex, any-to-any data integrated/transformed** – no matter the system, application, format of data needed, BridgeGate Health handles the transaction and transforms the data in the format and way you need it
- **Scalable and extensible to grow with you** – there is no need to “rip and replace” with BridgeGate; our solutions grow with your organization, protecting your existing investments and helping you prepare for the future
- **Security** – feel confident in your ability to safely store and share sensitive healthcare information
- **Visibility** – auditable chain-of-custody of data via comprehensive management dashboards that provide one view of meaningful information and alerts, notifications and error resolution
- **Lower cost solution for more integration** – better information while spending less on IT resources, development and maintenance than other integration solutions.
